Title

Substack SpaceTime

Subtitle

A visual feed reader for longform Substack content.

Tagline

See your subscriptions in time, not just in list.

Short Description

Substack SpaceTime is an open-source React app that transforms your Substack reading experience into a structured, temporal landscape. Instead of endless lists, it renders a calendar of longform writing, sorted by author, publication, and depth. It filters out podcasts, videos, and notes—leaving only text, organized into four smart buckets ranging from Quick Reads to Deep Dives. Designed for thinkers who read for the long arc, not the scroll.

Long Description

Substack SpaceTime is a minimalist but powerful reader built for readers who love the written word but hate the chaos of feeds. It fetches your Substack inbox using your

`substack.sid` token and reconstructs it into a calendar-based dashboard. Each post is tagged by publication, author, and estimated reading time. Quartile-based bucketing distributes your reading list evenly between short and long pieces, while filters let you focus only on substantial essays. The interface, built entirely client-side with React and Tailwind, works on GitHub Pages with zero backend—ensuring privacy, portability, and permanence.

It's your Substack world, rendered in space and time.

GitHub Repository

Repository name: `substack_spacetime`

Repository tagline: *A calendar-based Substack reader for text-only longform writing.*

Repository description:

React + Tailwind single-page app that fetches your Substack feed, filters out non-text content, calculates word counts, categorizes by reading depth, and visualizes post history on a timeline or calendar. Runs fully client-side on GitHub Pages using your own Substack session token.

Substack SpaceTime

A calendar-based reader for longform Substack writing

Substack SpaceTime lets you explore your Substack subscriptions through ti

Features

- Fetches your personal Substack feed (using your ``substack.sid`` cookie)
- Filters out video, podcast, and non-text content
- Word count + reading time estimation
- Quartile-based categorization into ****Quick Reads****, ****Short Articles****,

- Calendar and list views
- Publication frequency dashboard
- All client-side: no backend, no data stored
- Deploy easily on **GitHub Pages**

Setup

1. Fork or clone this repo:

```
```bash
git clone https://github.com/yourname/substack_spacetime.git
```

2. Enable GitHub Pages under Settings → Pages → Branch: main → /(root)
3. Log in to Substack , open DevTools → Application → Cookies → substack.sid
4. Copy the cookie value and paste it into the app when prompted.
5. View your reader at [https://yourname.github.io/substack\\_spacetime](https://yourname.github.io/substack_spacetime)

## Tech Stack

- React 18 (UMD build)
- TailwindCSS CDN
- Lucide React Icons
- No backend, no build step

## License

MIT

**Why:** Because Substack deserves better visualization.

**Who:** Built by a reader who values attention over algorithm.

Sources

A minimalist logo representing a clock face interlaced with a stylized folded newspaper. Two strong flat colors—deep orange and off-white. The geometry should suggest both time and reading without literal text. Circular frame, subtle asymmetry, clean vector style, mid-century modern feel.
